

TAKE IT AS A GIVEN...

This stylish new power cat can be whatever you want it to be

GIVEN POWER CATAMARANS is now producing the Given T11 power catamaran range in Australia. The Given range of power and sail catamarans has been manufactured under license in New Caledonia and New Zealand for more than 40 years. They're now being manufactured at Henderson in Perth, WA.

Given Power Catamarans, in conjunction with Seafest Marine, has established a specialised division to manufacture these high performance fibreglass power cats, especially for the Australian market.

The T11 is a sea going vessel with plenty of luxury that's built to the highest standards without going overboard on price.

In 2003, Given Power Catamarans

introduced an 11m flybridge (outboard powered) catamaran that could deliver economical fuel efficiency and 30-plus knot performance. It heralded the introduction of high-powered, four-stroke outboards to the offshore cruiser class.

The only helm on this boat is on the flybridge. The helm console has room for the dual engine instrumentation and the electronics package of the buyer's choice.

Fishermen will love the T11's roomy aft cockpit. It has a teak-laid deck, which extends into the main saloon.

The galley's in the port hull, which separates the function of cooking from the saloon, but keeps the cook in touch with people on the opposite lounge. The décor is simple and well done. There's good use of timber trim and all surfaces are designed for ease of maintenance. The boat is offered in a three double-cabin configuration.

Given hasn't named this model — it's simply known as the 11m. It's a sportfisher, a long-distance cruiser, a party boat, or whatever you want it to be. A base boat has a starting price around \$475,000. ⚓
